PEA PROTEIN

Key Points:

- ✓ Sustainable protein source
- ✓ 80% protein and 4% oil
- ✓ Highly Digestible

Product Description

A natural vegetable source, Pea Protein is a sustainable product supplying a good source of protein and amino acids, with 80% protein and 3% oil.

Pea Protein is produced from yellow pea, which presents a sustainable protein source. The process is relatively simple and involves drying and grinding peas into a fine flour. The flour is then mixed with water to remove the fibre and starch, which then leaves the protein, vitamins and minerals in paste form. It is this paste that is then dried and grounded further to produce the pea protein powder we recognise.
